

The top graph shows distance (km) on the y-axis (0 to 25) and time (h) on the x-axis (0 to 1.0). A straight line from (0,0) to (1.0, 25) represents the maximum possible distance. A series of curves below it represent the actual distance traveled at different times, with the shaded area indicating the range of possible distances.

The bottom graph shows time (h) on the y-axis (0 to 1.0) and distance (km) on the x-axis (0 to 25). A straight line from (0,0) to (25, 1.0) represents the maximum possible time. A series of curves above it represent the actual time taken at different distances, with the shaded area indicating the range of possible times.
