

The top graph shows the number of vehicles required for a given number of people. The y-axis represents the number of vehicles (차량) and the x-axis represents the number of people (인원). The graph is divided into two regions: a linear region for the first part of the range and a non-linear region for the second part. The non-linear region is shaded blue.

The bottom graph shows the number of people that can be transported by a given number of vehicles. The y-axis represents the number of people (인원) and the x-axis represents the number of vehicles (차량). The graph is divided into two regions: a linear region for the first part of the range and a non-linear region for the second part. The non-linear region is shaded blue.
