

The top graph shows the relationship between time (時間) on the x-axis and distance (距離) in km on the y-axis. The x-axis ranges from 0 to 0.8 hours, and the y-axis ranges from 0 to 100 km. A shaded blue area represents the range of possible distances. The area is bounded by a horizontal line at 100 km from 0 to 0.4 hours, and a diagonal line from (0.4, 100) to (0.8, 0). The area is also bounded by a series of downward-sloping curves that start at various points on the y-axis and end at various points on the x-axis.

The bottom graph shows the relationship between time (時間) on the y-axis and distance (距離) in km on the x-axis. The x-axis ranges from 0 to 100 km, and the y-axis ranges from 0 to 0.8 hours. A shaded blue area represents the range of possible times. The area is bounded by a horizontal line at 0.4 hours from 0 to 40 km, and a diagonal line from (40, 0.4) to (100, 0.8). The area is also bounded by a series of upward-sloping curves that start at various points on the x-axis and end at various points on the y-axis.
