

The top graph illustrates the relationship between the number of people (personnel) and time for a given task. The vertical axis represents the number of people (personnel), and the horizontal axis represents time. The graph shows a series of curves that represent the time required for a given task as the number of people increases. The curves are labeled with the number of people (personnel) required for each task, ranging from 1 to 10. The curves show that the time required for a given task decreases as the number of people increases, and the rate of decrease is greater for tasks requiring more people.

The bottom graph illustrates the relationship between the number of people (personnel) and time for a given task. The vertical axis represents the number of people (personnel), and the horizontal axis represents time. The graph shows a series of curves that represent the time required for a given task as the number of people increases. The curves are labeled with the number of people (personnel) required for each task, ranging from 1 to 10. The curves show that the time required for a given task decreases as the number of people increases, and the rate of decrease is greater for tasks requiring more people.
