

Figure 1 consists of two graphs. The top graph shows the relationship between the number of people (人数) on the y-axis and time (時間) on the x-axis. The y-axis ranges from 0 to 1000, and the x-axis ranges from 0 to 100. Three curves are plotted, all starting at a high value (around 1000) and decreasing over time. The curves represent different scenarios, with the top curve being the highest and the bottom curve being the lowest. The bottom graph shows the relationship between the number of people (人数) on the y-axis and time (時間) on the x-axis. The y-axis ranges from 0 to 100, and the x-axis ranges from 0 to 100. Two curves are plotted, both starting at a low value (around 10) and increasing over time, eventually leveling off. The curves represent different scenarios, with the top curve being the highest and the bottom curve being the lowest.
