

The figure consists of two line graphs. The top graph shows the relationship between population (Y-axis, ranging from 100 to 120) and GDP (X-axis, ranging from 1970 to 2010). The graph displays a blue line representing the GDP trend, which starts at approximately 105 in 1970, peaks at about 115 in 1980, and then declines to around 100 by 2010. A shaded blue area represents the range of GDP values, which is bounded by a line starting at 105 in 1970 and ending at 100 in 2010. The bottom graph shows the relationship between population (Y-axis, ranging from 100 to 120) and the number of employees (X-axis, ranging from 1970 to 2010). The graph displays a blue line representing the number of employees, which starts at approximately 105 in 1970, peaks at about 115 in 1980, and then declines to around 100 by 2010. A shaded blue area represents the range of the number of employees, which is bounded by a line starting at 105 in 1970 and ending at 100 in 2010.
